MEDIA STATEMENT

TZANEEN WATER SAFE TO DRINK

From the 20th to the 22nd of February 2016, we embarked on a process of cleaning three of our reservoirs supplying water to our residents in Tzaneen. We had to undertake that process after complaints from residents who have been receiving water that look slightly dirty. We are pleased to receive reports that this process has yielded positive results and our people have seen a significant change in their water.

This incident has led to others taking an advantage to cause unnecessary panic among residents and consumers of our water. There are rumours that our water is unsafe to drink and is not blue drop certified.

The department of Water Affairs and Forestry conduct regular tests on our water treatment plants and provide the results live on their website.

We have not yet
